What is the RBM21?

RBM21 is a control system that simplifies the management of access points.

It lets you program in **Stand Alone mode** (directly on the control board) or **On Line** by connecting it to a personal computer and installing the corresponding **dedicated Came Software** (compatible with Windows Xp and subsequent operating systems).

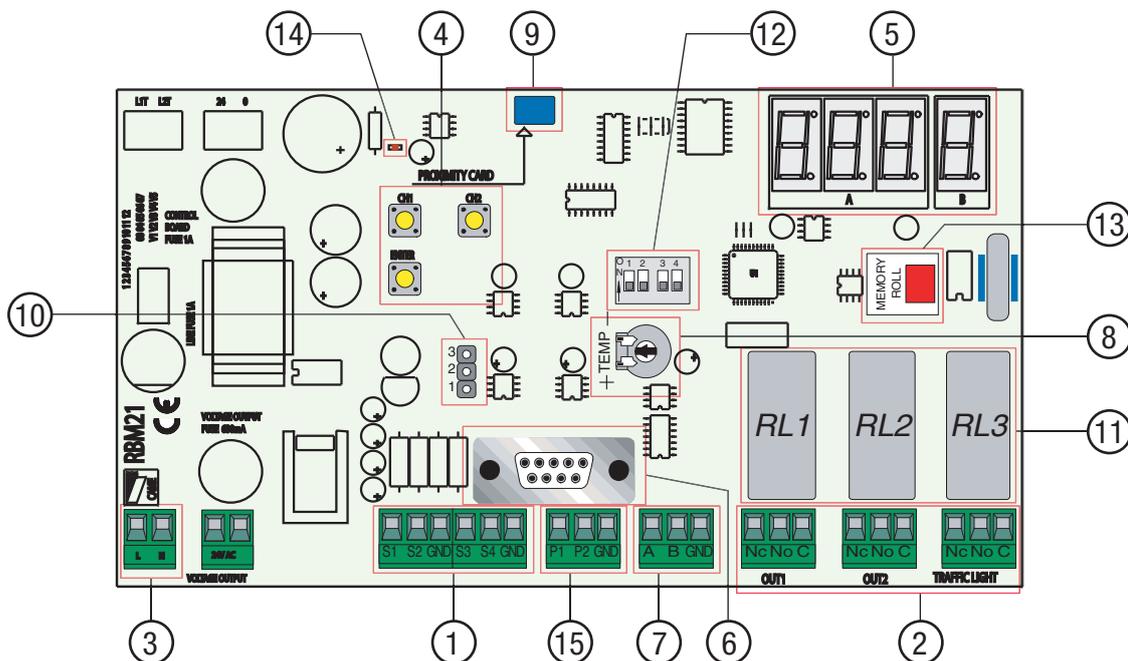

In **Stand Alone mode** you can program only RBM21's basic functions, such as, adding and deleting Cards for normal access.

Whereas in **On Line mode** you can program the system even for prepaid access (number of entries), scheduled credit (quantity of time), anti-PassBack (single-member using the Card) and timed anti- PassBack (entry granted at certain time intervals).

Technical data

Power supply	230 V AC
Power draw	50 mA
Relay output	3
Traffic light output	1 (can be activated only in On-Line mode)
RS 232 Port for connecting to a PC	Maximum distance 5 m
RS 485 Port for connecting to a PC	Maximum distance 1,000 m, with PC40 interface
Memorable Cards	500 among Proximity Cards and / or Swipe (magnetic) Cards
Programming	with Main Card or Password in Stand-Alone mode; via software in On-Line mode

RBM21 control board- description

| 8. Relay 2 timer trimmer | |

Display Messages

When you power on the RBM21, if the memory is completely empty, all of the central segments on the display will light up.

If any memory locations are already taken, the left-hand display will shown a dash. It also shows the Stand By position.

DIP switch functions

DIP switch 1 ON
Managing the traffic light via the magnetic coil

DIP switch 3 ON
Relay n. 1 step-by-step

DIP switch 2 ON
Differentiated Discharge

DIP switch 4
No function, leave OFF.

On-Board Sensor

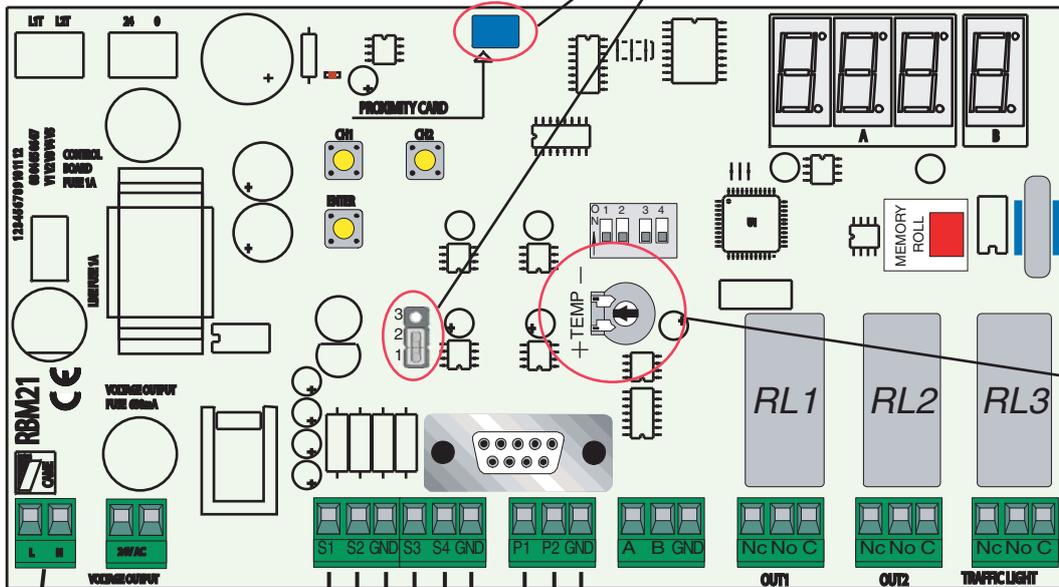

This is a proximity sensor built-into the control board.

It emulated reader 4 and is for memorizing the Cards (only proximity cards) directly onto the control board; when readers are located far off. To activate it (and deactivate it at the end of the memorization process) use the selection strip.

Connections

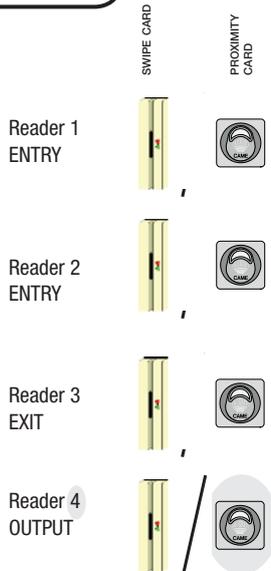

SELECTING THE ON-BOARD SENSOR

<p>Bridge 1 and 2 enable reader 4 (default)</p>	<p>Bridge 2 and 3 enable On-Board sensor</p>
---	--

Time-Scheduler
Setting
Relay 2 (RL2)
from 1" to 5'

Power supply
230 V AC

① = Red
② = Black

Relay 1 Contact Output
(RL1) max 10 A - 230 V

Relay 2 Contact Output
(RL2) max 10 A - 230 V

Relay 3 Contact Output (RL3)
Traffic Light
max. 5 A - 230 V

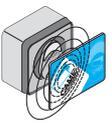

P1-GND
Connection (NO)
Entry coil

P2-GND
(NO) Connection
Exit coil

The following pages illustrate all of the procedures that can be managed in **Stand-Alone mode** with **proximity sensors**; for swipe **readers** use the same instructions, but be careful that, where it says "hold close", "position", "pass" or "present", you will need to swipe the card through the reader.
For the on-line mode instructions, please refer **Came**.

Memorizing 1st Card (Main Card)

The **The Rbm21** always considers the first memorized Card as the **Main Card**, with which you can do all of the procedures described here. You must therefore be careful to keep it safe because, together with the Memory Roll card, it is indispensable for making any changes or for restoring Card programming.

Sequence of steps ^①		What appears on the Display	
A	Press ENTER		Displays F - 1 
B	Press ENTER again		Flashing F - 11 
C	To change the relay you want to control, press CH1 once or twice , otherwise go on to the next step ^②		It changes the relay associated to the Main Card 
D	Hold the 1st Card close to the sensor for two seconds		The Stand By symbol appears to confirm that the Main Card is memorized ^③ 

^① In this, as with all following sequences, if more than 10 seconds elapse between one step and the next, the Rbm21 returns to its Stand-By position and you will need to start again.

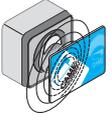

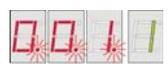

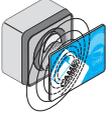

^② The Rbm21 assigns relay 1 by default; number 3 means both relays are activated (not the traffic light relay).

^③ Card memorization is always confirmed by the flashing of either the redo or green sensors, on the front piece.

Creating a 2nd Main Card

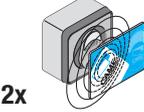

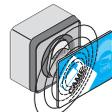

Using an already memorized Card you can create a second Main Card.

 The RBM21 only accepts two Main Cards

Sequence of steps		What appears on the Display	
A	Hold the Main Card close		
B	Press ENTER		Displays F - 1 
C	Press CH1		Displays F - 2 
D	Press ENTER		Flashing F - 2 
E	Hold the Card you want to memorize as 2 nd Main Card		Once memorization is complete, the display will show F - 2 M steady (not flashing) 

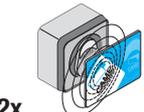

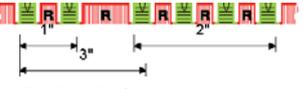

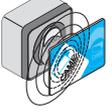

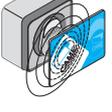

Memorizing Cards ^④

After the Main Card you can memorize all of the other Cards, **on the On-Board sensor...**

Sequence of steps		What appears on the Display	
A	Hold the Main Card close the on-board sensor twice		After the position of the Main Card (001), the first available position flashes
B	To change the relay to command, press CH1 once or twice , otherwise move on to the next step		Change the relay associated with the available position
C	Hold the Card you want to memorize close, for three seconds		Once memorized, Sto will appear... ... and then the next available position will flash

At this point, you may continue memorizing other Cards (by repeating the previous two steps) or you can let 10 seconds elapse until the Rbm21 returns to its Stand-By position.

... or **directly on the TSP00**, without actually switching on the board (this is a quicker procedure to add Cards, but it excludes the possibility of associating both relays to the Card).

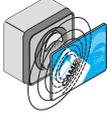

Sequence of steps		Sensor's LED flashing sequence	
		$V = \text{green}$ 	$R = \text{red}$ 
A	Within three seconds , hold the Main Card twice close to the		<p>1st^{pass} 2nd^{pass}</p>  <p>sensor, then, for 10" it will flash with lesser frequency while waiting for a relay change or for the Card to be memorized</p> 
B	To change the relay from 1 to 2 and vice versa, hold the Main Card close to the sensor for a third time , otherwise move on to the next step		<p>you can recognize relay 2 from the longer lasting green flashing</p> 
C	Hold the Card you want to memorize close to the sensor for about three seconds		<p>3 green flashes, confirm that the Card is memorized</p> 

At this point, you may continue memorizing other Cards (by repeating the previous two steps) or you can let 10 seconds elapse until the Rbm21 returns to its Stand By position (the red LED stays on)

^④ There is **no On-Board** sensor for magnetic cards, so you can only proceed with **the first procedure** and at least on LT001 sensor connected and near the Rbm2 control board (this configuration is also required for all of the other procedures).

Deleting Cards

At any time you can delete one or more Cards.

Sequence of steps		What appears on the Display	
A	Hold one of the Main Cards close		
B	Press ENTER		Displays F - 1 
C	Press CH1 three times	 3x	Displays F - 4 
D	Press ENTER		The first memory location appears ⁵ 
E	Press CH1 or CH2 to choose the location to delete	 001-> 002-> 003-> ...  001-> 500-> 499-> ...	The location to delete appears , for example, location number 5 ⁶ 
F	Press ENTER		Once the location is deleted, the entire display flashes ⁷ 

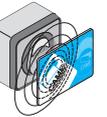

⁵ Be careful **not to cancel the main Card Master** (position 001, always has 3 flashing points).

⁶ If the letter **C** flashes, it means that in that location there are no memorized Cards.

⁷ Continue with another Card to delete or let 10 seconds elapse to continue with another procedure.

Deleting Cards TOTALLY

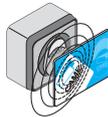

Procedure that **zeros the Rbm21's memory**; all of the Main Cards are deleted.

Sequence of steps		What appears on the Display	
A	Hold one of the Main Cards close		
B	Press ENTER		Displays F - 1 
C	Press four times CH1	 4x	Displays F - 5 
D	Press and keep pressed ENTER , for about 10 seconds		C L r A appears and flashes ; after 10 seconds the writing stays lit 
E	Release ENTER		It displays the symbol that the board is completely empty ⁸ 

⁸ To operate again with the Rbm21, you need to start again from "Memorizing 1 to Card" on p. 5.

Change Password

The Rbm21 features a Password that lets it operate without the help of the Main Card. The default Password is **1 2 3**, and it can be changed to any number between 1 and 500, in the following manner:

		<i>Sequence of steps</i>	<i>What appears on the Display</i>	
A	Hold one of the Main Cards close			
B	Press ENTER		Displays F - 1	
C	Press five times CH1	5x 	Displays F - 6	
D	Press ENTER		The current Password appears (in the example, the default one)	
E	Press CH1 or CH2 to select a new Password	 001-> 002-> 003-> ...  001-> 500-> 499-> ...	The new Password appears , for example 4 4 4	
F	Press ENTER		The Stand By symbol appears to confirm the new Password is memorized	

Transcribe the new Password here so you won't forget it

--	--	--

Using the Password to memorize Cards

Replace this sequence with step A "Hold the Main Card close twice" ...

		<i>Sequence of steps</i>	<i>What appears on the Display</i>	
Replace operation A	Press ENTER			
	Press CH1 work CH2 to view the Password	 001-> 002-> 003-> ...  001-> 500-> 499-> ...	The Password appears	
	Press ENTER		Displays F - 1	
	Press twice CH1	2x 	Displays F - 3	

... and continue with the other steps shown in the "Memorizing Cards" procedure on p. 6.

Using the Password with other procedures

Replace this sequence with step A "Hold the Main Card close" ...

		Sequence of steps	What appears on the Display
Replace operation A	Press ENTER		
	Press CH1 or CH2 to view the Password	 001-> 002-> 003-> ... 001-> 500-> 499-> ... 	The Password appears 

... and continue with the other steps shown in the procedures:

- "Creating a^{2nd} Main Card" on p. 5
- "Deleting Cards" of p. 7
- "Change Password" on p. 8
- "Deleting Cards totally" on p. 7
- "Saving data" on p. 10
- "Restoring data" on p. 10

Manage Parking

Parking facility managed via entry and exit coils and traffic light (DIP switch 1 set to ON).

		Sequence of steps	What appears on the Display
A	Press twice ENTER	2x 	Displays F - 1 
B	Press ENTER		Displays L 
C	Press CH1 and CH2 to set the system capacity	 	The number of parking spaces we want to set appears 
D	Press ENTER		
E	Press CH2		Displays F - 2 
F	Press ENTER		Displays 0 
G	Press CH1 and CH2 to set the number of busy parking spaces	 	
H	Release ENTER		

When the entry coil is enabled, the countdown is scaled up and the OUT 1 relay triggers.

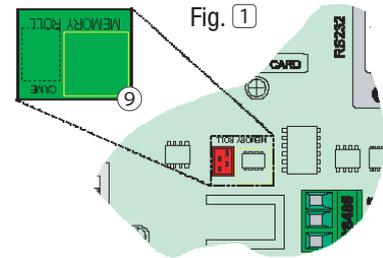

When the exit coil is activated, the countdown is scaled down and Relay OUT 2 triggers.

When the system capacity is reached (step C) the Parking relay triggers and inhibits contact P1 (entry) while the exit one (P2) always remains enabled.

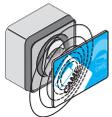

Saving data

This procedure allows you to save the data memorized in the RBM21, transferring them into the MEMORY ROLL card.

For this, as well as the following procedure, you need to fit the Memory Roll card into its corresponding connector; see fig. ①.

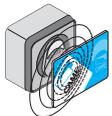

⚠️ Every time you either connect or disconnect the Memory Roll, you need to be careful and remember to cut off the main power supply to the Rbm21.

Sequence of steps		What appears on the Display	
A	Hold one of the Main Cards close		
B	Press ENTER		Displays F - 1
C	Press six times CH1		Displays F - 7
D	Press ENTER		Displays F - 7 U
E	Release ENTER		After a few seconds, it displays the Stand By symbol ⑩

📖 ⑩ The waiting time depends on the quantity of data to download or upload; the Rbm21 goes into Stand By to when the procedure is completed. Cut off the main power supply, remove the Memory Roll and file it in a safe place.

Restoring Data ⑪

This procedure lets you **restore the data** you stored, sourcing them from the MEMORY roll card.

Sequence of steps		What appears on the Display	
A	Hold one of the Main Cards close		
B	Press ENTER		Displays F - 1
C	Press seven times CH1		Displays F - 8
D	Press ENTER		Displays F - 8 d
E	Release ENTER		After a few seconds, the Stand By symbol appears ⑩

📖 ⑪ If replacing the Rbm21 control board or deleting the Main Card, to restore the date you will need to have the same actual Main Card that you memorized on Memory Roll (or the 2nd Main Card, in case you have lost the Main one), and first perform the procedure on p. 6.

Installing the Software

Only for **working in On-line mode** (managing via Personal Computer), you will need to install the software from the CD supplied with the RBM21; once it is installed, to program the system please see the corresponding PDF Guide that comes in the CD.

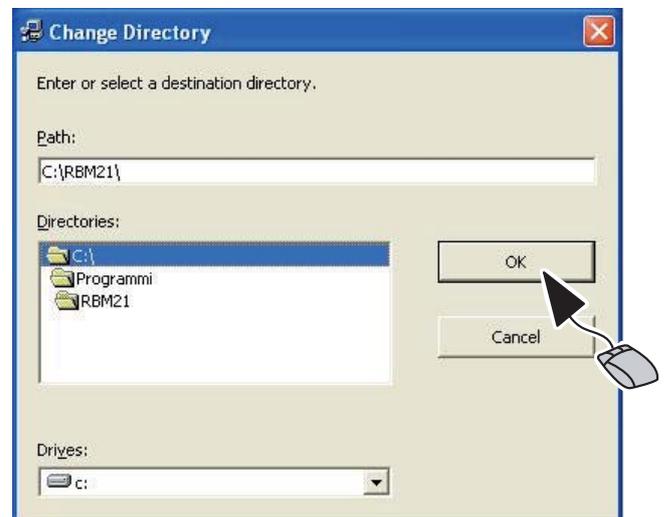

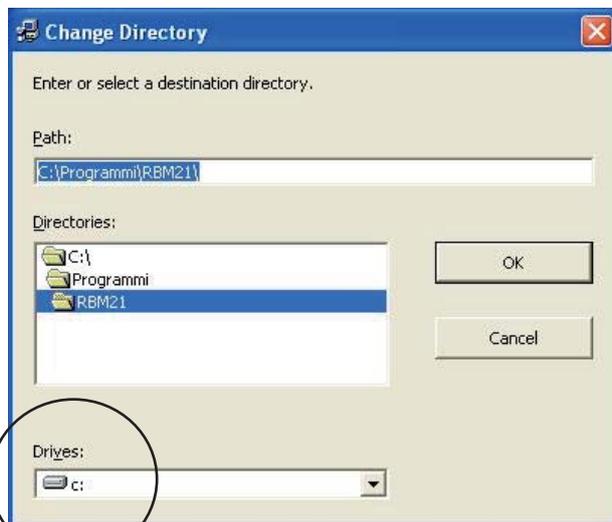

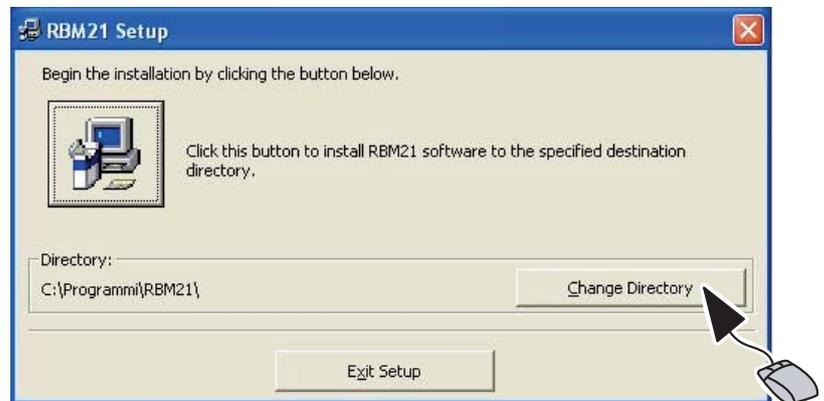

Minimum system requirements:

- Windows Xp Professional / Windows 7 Professional / Windows 8 Professional operating system;
- RS232serial port (alternatively use a USB/RS232 converter by installing the corresponding drivers).

Fit the CD into the reader and wait for the installation dialogue window to open (or launch the executable *setup.exe* from the file *RBM21_vxx\Install* on your PC, if locally copied).

Follow the instructions, always accepting the proposals except the one for the installation path.

CAREFUL! With Windows 7 and Windows 8, we suggest changing the installation path proposed by the software, by creating a new folder on your local disk C:\.

The installation folder name may be customized
